

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR A LOCATOR SERVICE

ABSTRACT

A method, system, and computer program product that provides locator services. A locator system includes a locator server that handles location requests received from a application server and/or over a network such as the Internet, and a database server coupled to a locator server. An Internet-enabled locator method includes a user entering a location code in an interface, searching for matching locales, and providing location information pertaining to the matching locales to a user.
